

Nature's Air & Water

PureHome Mini

Stainless Steel Under-Sink Water Filtration System

Premium Multi-Stage Filtration — No Extra Faucet, No Countertop Drilling

★ Why Choose the Nature's Air & Water PureHome Mini Under-Sink Water Filter?

The Nature's Air & Water PureHome Mini is a compact, **stainless steel under-sink water filtration system** that connects directly to your **existing faucet**. There's **no need to drill a hole in your countertop** and no separate drinking-water faucet to install — perfect for finished kitchens and rental homes.

The PureHome Mini's **stainless steel housing** offers a **stronger, more durable design** than many lesser-quality plastic under-sink filter units, which can be more prone to cracking and leaking over time. With PureHome Mini, you get a robust, long-lasting system designed for everyday use.

A built-in **hanger bracket** allows quick, efficient installation under the sink, keeping your cabinet organized and making filter changes simple. The system is **completely non-electric** and runs solely on your home's water pressure — **no electrical service, wiring, or outlet is required**.

By filtering water right at the tap, the PureHome Mini can dramatically **reduce your need for single-use bottled water**, helping you **save money** while also **reducing plastic waste and your environmental footprint**. Enjoy cleaner, fresher-tasting water for drinking, cooking, coffee, tea, and ice — without changing the look of your kitchen or bathroom.

Advanced Multi-Stage Composite Filtration Technology

At the core of the **PureHome Mini under-sink filtration system** is the **PureHome Mini Replacement Filter**, a multi-stage composite cartridge that combines **five filtration technologies** in one easy-to-replace filter:

✓ Sediment Pre-Filtration

Captures sand, rust, silt, and visible debris to help protect your plumbing and extend the life of the filter media.

✓ **Double-Sediment Membrane Layers**

High-efficiency polypropylene membranes help reduce fine particulate and turbidity, improving clarity and appearance of your tap water.

✓ **KDF-55 Redox Media**

Specialized copper–zinc alloy used to help reduce:

- Chlorine
- Heavy metals (including lead, mercury, chromium, copper)
- Certain bacteria
- Scale-forming minerals

✓ **Double Coconut-Shell Activated Carbon**

Adsorbs VOCs, chemical contaminants, disinfection byproducts, and the compounds that cause unpleasant taste and odor in tap water.

✓ **Polishing Layer for Final Water Clarity**

Provides a final “polish” so water leaves the under-sink system clear, clean, and refreshing.

★ **Key Features & Benefits of the PureHome Mini System**

✓ **Stainless Steel Housing for Strength & Reliability**

Durable, corrosion-resistant stainless steel construction offers a **stronger, more reliable design** than many plastic under-sink water filters, reducing the risk of cracks and leaks.

✓ **Uses Your Existing Faucet**

Connects to the cold-water line so you get filtered water **directly from your current faucet** — no extra tap required.

✓ **No-Drill Countertop Installation**

Because there’s **no separate faucet**, you won’t need to drill a hole in your countertop or sink, making this an ideal **non-invasive water filter upgrade**.

✓ **No Electrical Service Required**

The PureHome Mini is a **non-electric, inline under-sink filter** that operates solely on water pressure — **no outlet, wiring, or power supply needed**, and no added noise.

✓ **Hanger-Style Design for Efficient Installation**

Built-in hanger bracket for a clean, professional-looking under-sink install and easy access when it’s time to replace the filter.

✓ **Space-Saving Under-Sink Footprint**

Compact, vertical design fits comfortably in tight cabinets in kitchens, bathrooms, and utility rooms.

✓ Up to 20,000-Gallon Filter Life (or ~12 Months)

Long-lasting filter cartridge reduces the frequency of replacements (actual life varies with water quality and usage).

✓ High Flow Rate

Engineered to maintain a strong flow so filling pots, bottles, and pitchers doesn't feel slow or restrictive.

✓ Retains Beneficial Minerals

Reduces unwanted contaminants while preserving beneficial minerals that contribute to fresh, crisp-tasting water.

✓ Enhanced Chlorine, Taste & Odor Reduction

Transforms ordinary tap water into cleaner, better-tasting water for drinking, cooking, and beverages.

✓ Heavy-Metal Reduction via KDF-55

Provides additional peace of mind for families concerned about select heavy metals in their home water supply.

✓ Fast, Twist-and-Replace Filter Changes

Simple shut-off and twist-off design, with a supplied wrench for the housing, makes routine PureHome Mini replacement filter changes quick and tool-easy.

♥ Potential Health, Economic & Lifestyle Benefits

1. Reduced exposure to chlorine and chemical byproducts commonly found in tap water
2. Lower intake of select heavy metals through advanced KDF redox and carbon filtration
3. Better-tasting water that encourages more frequent hydration for the whole household
4. Improved flavor for coffee, tea, cooking, and ice, while helping protect water-using appliances from sediment and scale
5. Fresher taste and odor that may help reduce reliance on single-use plastic bottled water
6. **Economic & ecological benefits** — cutting back on bottled water purchases can **save money over time** and **significantly reduce plastic waste** headed to landfills and recycling streams

💧 Ideal Applications for PureHome Mini Under-Sink Filtration

- **All under-sink locations:** kitchen sinks, bathroom sinks, laundry/utility sinks
- Homes using municipal water supplies
- Homes with mild well-water concerns (sediment, taste, odor)

- Households wanting high-quality drinking water while retaining beneficial minerals
- **Rented homes and apartments** — the no-drill design allows easy removal so you can **take the PureHome Mini with you** to your next home
- Anyone who wants a compact, stainless steel, multi-stage **under-sink water filter** that doesn't require drilling a new faucet hole or adding electrical service

For best results, always use genuine **Nature's Air & Water PureHome Mini Replacement Filters** and replace the cartridge approximately every **12 months or 20,000 gallons**, whichever comes first.
